App - Session 1

• Cost optimization

• DevOps

• GitHub organization

• Repository strategy

• CI/CD

• Testing

• Deployment

• Monitoring

Phase 6

• Business

• Pricing

• Marketing

• Referral system

• Community

• Launch strategy

Phase 7

• Master documentation

• PRD

• Architecture docs

• Database docs

• API docs

• Design system docs

• Deployment docs

• Maintenance docs

Phase 8

• AI-ready implementation prompts for ChatGPT, Codex, Google AI Studio/Antigravity, Gemini, etc.

7/1/25, 5:13 PM

App - Session 1

• Prefer free or low-cost technologies whenever possible.

• Avoid unnecessary complexity.

• Design for scalability, but implement incrementally.

• Build reusable shared services instead of duplicating logic.

• Keep user experience simple while hiding system complexity.

• Revisit earlier decisions if a better architecture is found.

Logo Note

Ignore all logo-generation discussions from previous chats as finalized decisions.

Treat existing logo images only as concept references. Include them later in documentation with a short description of their intended use, but do not treat them as the final brand identity.

I also recommend creating one dedicated chat that never discusses implementation—only architecture and product decisions. Once that is finalized, use separate chats for frontend, backend, AI database, and deployment. This separation makes it much easier for AI coding tools to stay focused and maintain context.
