I created an **editable Canva design** from your uploaded AROH logo.

You can open and edit it here:

- **Edit in Canva:** <https://www.canva.com/d/CH-lad7H6u5WUHome>
- **View:** <https://www.canva.com/6/Zd4YCxN6g055mfb>

My suggestions

I wouldn't stop at making the offer letter look like a typical corporate document.

Since AROH **has its own design philosophy**, every official document should feel like an AROH product.

I'd define a complete AROH Corporate Identity System including:

- Executive Letterhead
- Offer Letter
- Appointment Letter
- ID Cards

- Certificates
 - Appreciation Letters
 - NDA
 - Employment/Volunteer Agreements
 - Business Cards
 - Email Signature
 - Presentation Template
 - Report Template
 - Invoice
 - Proposal
 - Meeting Notes
 - Press Release
- Design language I'd use**
- Instead of a conventional blue corporate style:
- Minimalist
 - Premium
 - White-space driven
 - Thin geometric lines
 - Frosted glass accents
 - Soft shadows
 - Navy + Ivory + Warm Gradient
 - Abstract geometry inspired by the AROH logo
 - Large typography
 - Subtle motion-inspired curves
 - Plenty of breathing room
- Think of the visual language somewhere between **Apple**, **Linear**, **Notion**, and **OpenAI**, while remaining uniquely AROH.
- Recommendation**
- Rather than creating documents one by one, I recommend we create an **AROH Brand & Corporate Identity Manual** after the audit.
- That manual would define:
- Official document layouts
 - Typography
 - Colors

• Accessibility issues

• Scalability concerns

• Ecosystem readiness

5. Compare the audit findings with the intended ARCH vision and identify where the gap

6. Produce a Gap Analysis:

- Current State
- Desired State
- Recommended solution
- Priority

7. Create a prioritized action plan and recommend the best implementation order.

8. Challenge assumptions where appropriate. If the audit recommends something that con

9. Preserve existing strengths while minimizing unnecessary reinvention.

10. Do not begin designing or implementing new features until the audit findings have

Project context:

ARCH is being developed as a scalable software ecosystem rather than a single website.

The long-term architecture consists of:

• Independent products (Unleash, DeepPath Pro, Spellex, Basic Mirror, Task Pro, and Fuku

• A shared ARCH Platform providing reusable packages and services

• Shared authentication

• Shared AI

• Shared UI component library

• Shared theme and action system

• Shared configuration

• Shared analytics

• Shared microservices

• Shared product registry

• Shared APIs

• Future Arch ecosystem

Development philosophy:

• Architecture First.

• Long-term scalability over short-term convenience.

• No unnecessary complexity.

• Minimize technical debt.

• Documentation is treated as part of the implementation.

• Every architectural decision should support future ecosystem expansion.

• Foster reusable platform capabilities over duplicated implementations.

• Maintain a consistent design language and engineering standards across all products.

• Every recommendation should include reasoning, trade-offs, and long-term impact.

Important:

Do not assume the audit is correct simply because it exists. Validate its conclusions

After the audit has been fully reviewed and discussed, continue guiding the project as

This prompt will let the next conversation resume cleanly from the audit analysis while preserving the architectural direction you've established for ARCH, without carrying forward today's IRL/after-latter work.
